## Ziptrak® Interior / indoor blinds

The Ziptrak® Interior track guided blind system is ideal for installations where maximum room darkening is required such as bedrooms, home theatres, hotel and hospital rooms.

Room darkening is achieved by the specially designed tracks which lock the fabric on both sides of the blind, closing all gaps and offering privacy, light control and insulation while the blind smoothly glides up and down and holds in any position effortlessly.

Great care has been taken in the design of this product to achieve these fantastic benefits whilst maintaining stylish good looks.

### Maximum size (mm)

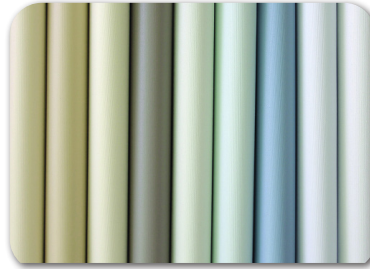

All fabrics:  
3,000(W) x 2,800(D)\*

\*Larger size  
available upon  
enquiry

### Child safe

Completely cord and chain free, Ziptrak® Interior eliminates the hazards other interior window coverings can present to small children.

### Fabrics

A wide selection of fabrics are available to suit Ziptrak® Interior in a range of different colours, textures and opacities. Select your favourite fabric to complement your interior décor or to coordinate with other blinds.

### Superior room-darkening

By enclosing the blind within the tracks and system designed pelmet, light gaps are minimized, providing the ultimate solution for light control and privacy.

### Motorisation

Optional motorisation is a popular choice for many household and commercial applications. The motor is hidden within the pelmet and the blind can be left at any height.
